

## HOSTED SOLUTION

### INTRODUCTION

A number of years ago, Profitsflow recognised the need to provide an independent browser-based ERP system to new and existing clients. In 2021 Profitsflow partnered with Irish company Servecentric Enterprise Cloud (SEC).

This partnership has led to a solution that can provide high performance and consistent availability all while saving costs.

The combination of EFACS E/8 coupled with our state of the art host partner provides the ideal hosted ERP solution for manufacturers.

### OBJECTIVES

Utilising a cloud/hosted solution allows the user to remove the need to install software patches and upgrades on each client PC as the software resides on the server and is accessed via a browser.

This solution also provides security for your data. The data is physically stored in highly secure data centres. Support is provided 24/7/365 with engineers constantly on call to resolve any and all issues as they arise. Environmental controls for temperature, humidity and protection against events such as storm, flood, fire etc. are standard.

### OUR HOSTING PARTNER

Profitsflow's partner Servecentric is a privately Irish owned Cloud and Data Centre Services provider founded in 2002.

They provide support services including remote hands and eyes, monitoring, backup, installation and IT security services.

Also possess ISO 9001, ISO 27001 and ISO 20000 certification

### AT A GLANCE

**Due to the many benefits associated with hosted solutions many of Profitsflow's current clients based have made the switch from on premise servers to cloud based solutions**

servecentric

## HOSTED SOLUTION

### ADVANTAGES OF A HOSTED SOLUTION

#### Ease of Administration

Software is installed on the server only. No need for a client installation - users simply point their web browser at a URL which directs them to the server.

#### User Friendly

Everyone is familiar with a browser interface. The software is clean looking, logical but most importantly conforms to what users intuitively expect from it - a logical flow of screens delivered in a familiar environment and format.

#### Software code base

As the software is written in the latest internet technologies, it is easier to support, extend and even for customers to customise. Integration with other systems follows internet standard such as XML, while screen customisations can be delivered using a derivative of JavaScript.

#### Infrastructure

Along with elsewhere, Ireland's broadband infrastructure is rapidly expanding. Fibre is available now to most businesses. And the service is just about as reliable now as the electricity supply. This makes a hosted solution considerably more feasible.

#### Cost

As cloud and hosted solutions become more and more the norm, the cost of adopting a cloud infrastructure is reducing, making cloud an increasingly cheaper option.

### SUMMARY

**All versions of the EFACS E/8 product are web-based which means that it is easily adaptable and can be moved efficiently from an on-premises to a hosted server - it can be done overnight.**
